**CONCURRENT
DESIGN EXPLORATION OF
ALL THINKABLE OPTIONS**

< 📖 🔔 2025 | MODSIM Summit

“

*“We found value in the ability to run CAD and CAE model creation and CAE verification in the **same place**. This means using MODSIM, we can verify multiple functions in parallel on the **same platform**, allowing a single designer to do what multiple engineers had previously done.*

*In other words, we can achieve a **significant improvement** in development efficiency.”*

Shigeto YASUHARA
Senior Chief Engineer
Honda Motor Co., Ltd.

“

*“On the **same platform**, I can switch between tools without realizing that I changed between apps. I have the simulation app, and the modelling app, the ergonomics app, and what is great is that when a new application is released, I can use it immediately on the same platform. So it is very **seamless**. You don't even realise that you're changing tools.”*

Fabien CHANCEL
Industrial Designer and Engineer
Self-employed

“

*“The sooner we invest, the **lower we invest**. Late modification is always very very expensive. ...**concept structure engineering is strategic**... in the very early phase of the development of a car.”*

Pascal PANCRACE
Head of Innovation Projects in Simulation
RENAULT

QARGOS Streamlines Development and Aims for Zero Physical Prototypes with MODSIM on the 3DEXPERIENCE Platform

Innovative transportation solutions provider reduces vehicle weight by 30 percent, optimizes aerodynamics, and minimizes the need for physical prototypes with SOLIDWORKS and 3DEXPERIENCE Works Simulation portfolio.

Challenge

Invent, develop, and commercialize the world's first purpose-driven, electric, smart, two-wheeled, compact logistics vehicle to revolutionize sustainable logistics operations by providing a safer, more efficient means to deliver goods in crowded urban settings with greater load capacity than existing motorcycles and scooters.

Solution

Leverage the unified, integrated modeling and simulation (MODSIM) approach offered by the cloud-enabled 3DEXPERIENCE® Works portfolio to accelerate innovation, while securely managing data on the collaborative 3DEXPERIENCE platform. Implement a digital-twin approach to virtual prototyping with the help of 3DEXPERIENCE SOLIDWORKS® Premium, Collaborative Industry Innovator, SIMULIA Durability & Mechanics Engineer, SIMULIA Fluid Dynamics Engineer, SIMULIA Electromagnetics Engineer, SIMULIA Plastic Injection Engineer, 3D Motion Creator, and 3DSwymer roles on the cloud-based 3DEXPERIENCE platform.

Results

- Reduced vehicle weight by 30 percent, saving material cost and increasing vehicle efficiency
- Optimized vehicle aerodynamics, reducing rider fatigue due to drag forces
- Enhanced battery thermal management to improve efficiency, safety, and range
- Maximized size of cargo compartment, increasing cargo payload capacity

MODSIM DEMOCRATIZATION VIA VIRTUAL TWIN PHYSICS BEHAVIORS BASED ON MACHINE LEARNING MODELS

Miranda LEWIS
Body Engineer at ACME Automotive Design

Designer / Product Engineer

- Creates product designs
- Leverages Virtual Twin Physics Behaviors to simulate alternatives
- Compares alternatives based on physics KPIs

Michael TRAVIS
Simulation Analyst at 3DS Engineering Services

Simulation Analyst

- Decides which KPIs are needed to validate designs
- Creates and validates simulation scenarios
- Creates and deploys Virtual Twin Physics Behaviors, based on machine learning models
